

THIS EASY...

**VIMANA**

Self  
Check  
out  
(SCO)

# HOW IT WORKS...

Vimana SCO is part of Vimana Cash Line Automation portfolio. It is a range of self-checkout devices, allowing for unattended (or semi-assisted) article scanning and payment. Offered in the SCO-as-a-Device model, these machines seamlessly integrate with retailer's existing POS system. Available with wide range of features and accessories, colours and shapes, Vimana SCO can be configured to specific needs of a particular retail outlet. It is the most cost-effective way to implement this technology in your stores.

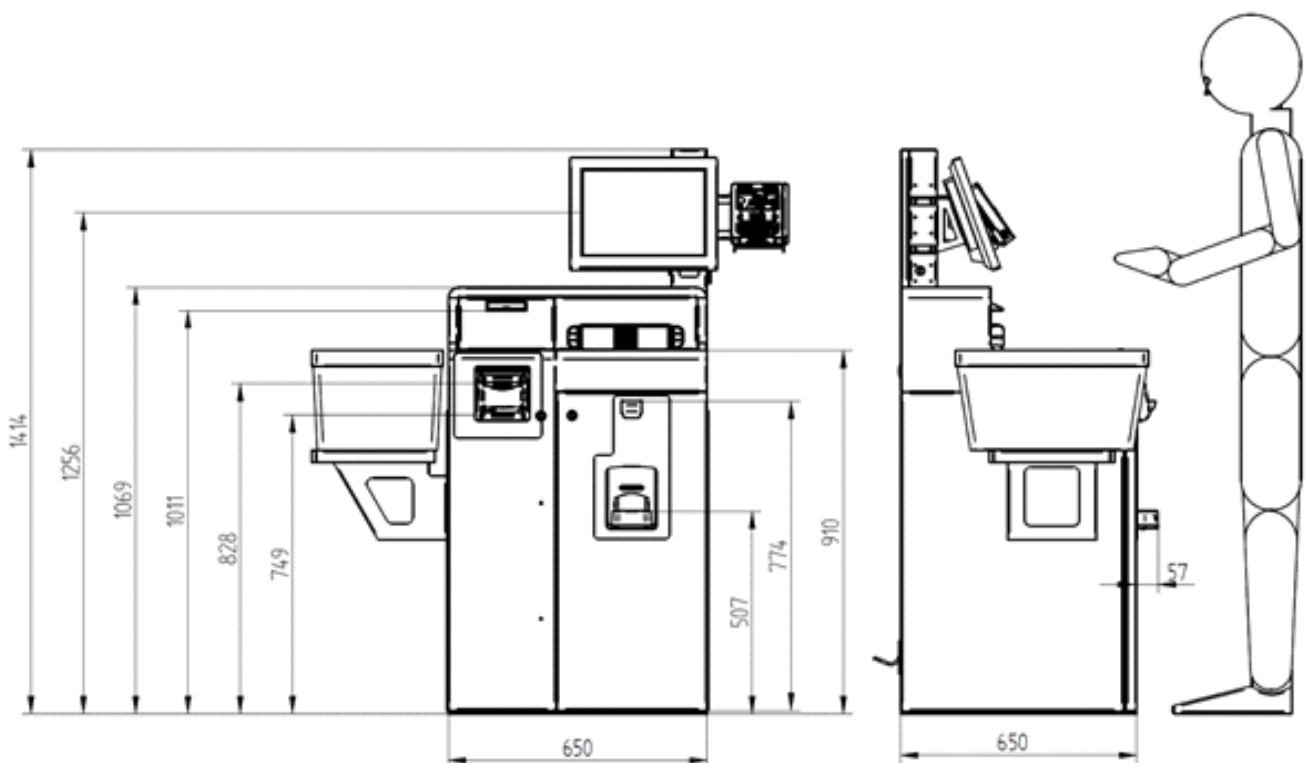

With a growing cost of employment and decreasing availability of personnel, self-checkouts (SCO) are becoming a real and financially attractive alternative for traditional checkout systems, providing the following advantages:

- lower the number of employees needed to serve customers at the till,
- reduced costs of checkout personnel training,
- reduced risk of personnel fraud,
- quick return on investment.

Usage of self-service checkout machines is possible both in small shops, where the staff is limited and a checkout can be self-served or convertible (supported by an employee), and bigger facilities, where this solution significantly increases checkout throughput with no need to use more space. Our devices are so compact, they frequently allow you to shrink cash line area and regain it for sales purposes.

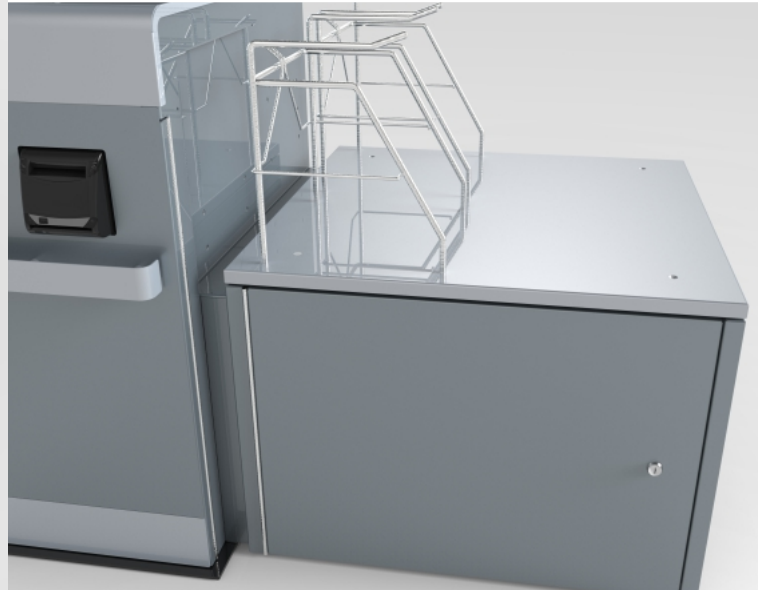

**As an independent manufacturer, we can offer dedicated devices, designed specifically for you, in accordance with presented requirements:**

- customized design and colours of devices,
- customer specific peripherals configuration,
- easy integration with existing IT systems,
- flexible financing of SCO investment with a device lease or rental options,
- integration with our other products for retailers and restaurants.

# HOW IT WORKS...

Modular design of our devices, allows to offer them in many configurations. We provide both cash (including fully recycling) and cashless units, with choice of touchscreens, flatbed scanners, printers, voucher readers and much more. We also offer convertible units, where SCO can be easily switched back to conventional till.

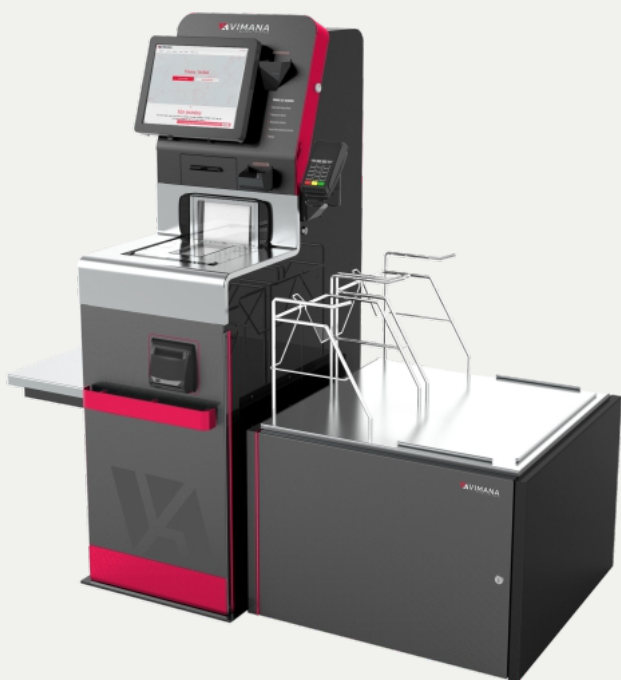

SCO systems offered by our company are a ground-breaking solution in terms of availability of this type of technology. Contrary to the solutions of our competitors, we provide self-service devices in the SCO-as-a-Service model. This means that we provide custom built checkout machines with installed software layer called "middleware". This layer is dedicated to processing payments and provide security of a transaction, while the end user sales application is provided by the client's ERP system. As a part of the SCO purchase and installation process, our consultants and developers work closely with your IT staff to create end user application best suited to your requirements and vision of customer's in-store experience.

**Such a strategy has many advantages:**

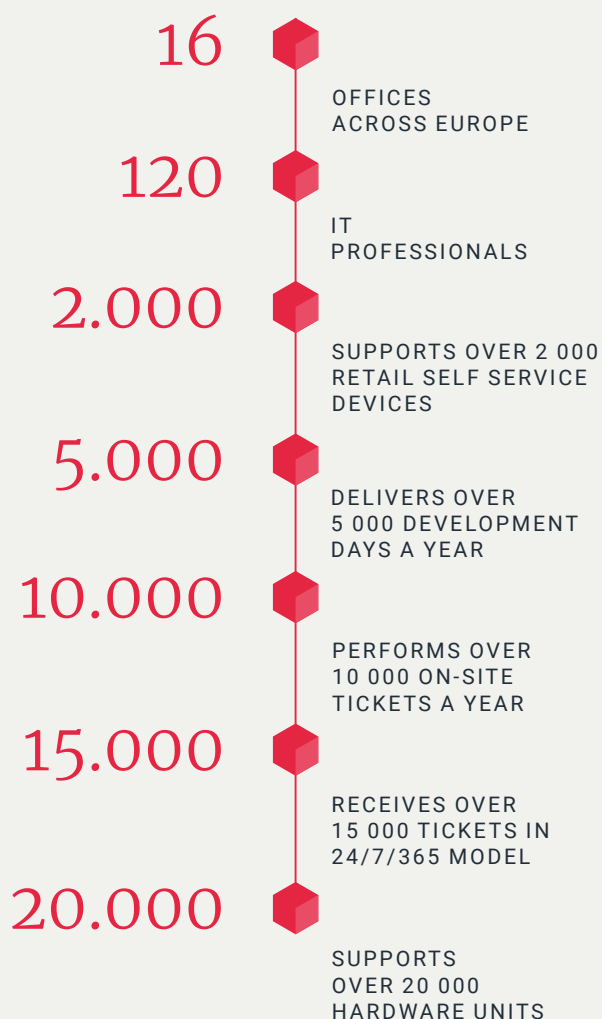

- does not require scrapping existing systems and applications (investment preservation).
- makes SCO part of your standard reporting systems and routines
- allows to design and implement your own sales and marketing concepts
- significantly reduces initial investment in self-service solutions

WITH OUR APPROACH YOUR SCO WILL QUICKLY BECOME PART OF YOUR CASH LINE, SHARING COMMON FEATURES, LIKE MARKETING ACTIONS, PAYMENT METHODS OR ADDITIONAL SERVICES FOR YOUR CUSTOMERS.

Vimana was formed in 2011 by a group of professionals with over 15 year's experience in IT-related corporations. It is a group of companies operating under one common name, but working in different yet complementary areas related to IT services.

Our organizations are linked and intersect using common resources and creating a flexible mechanism of providing high quality services and solutions at very attractive prices.
